

# How to find your Exchange Server

This article will assist you with retrieving your Exchange Server for mail client setups.

1. Sign into Webmail.
2. Upon signing into webmail, you will be redirected to the Outlook Web App corresponding to your environment.
3. Once redirected to the Outlook Web App, look at your browser's top bar, click into the bar, and select just the "hostname" portion. In this example, you would take "mex06.emailsrvr.com".

4. Now that you have the necessary server information, return to your mailbox setup and get your mailbox syncing.
